To whom it may concern,

The horse described above was examined on 21st March 2021 for injuries sustained to the right front cannon following a paddock accident. As a result of the injury, a sequestra developed on the lateral aspect of the right fore cannon bone. This required surgical removal which was performed under a general anaesthetic on 26th April 2022. Recovery from surgery was uneventful and the wound healed without complications. Follow-up radiographs obtained in December 2022 identified progressive smoothing of the bone at the site of the sequestra removal.

Radiographs were taken on the right forelimb on 16th February 2023. The swelling present on the lateral aspect of the right foreleg was firm and non-painful. Follow-up radiographs taken on Radiographs identified a slight raised area of smooth bone formation at the site of the sequestra removal.

If you have any further questions regarding this horse, please do not hesitate to contact us.
