Veterinary Report: Orere Point Lot 197, a Standardbred Colt,
Owned by Southen, Kate, 2122 Wards Road
R D 1
Charing Cross, 7571, Canterbury.

On the 8th January 2024 the above horse underwent a surgery at Canterbury Equine Clinic to remove an osteochondral fragment in the left hock. At surgery, an osteochondral fragment was found at the distal intermediate ridge of the tibia in the left tarsocrural joint. The fragment was removed and the remainder of the cartilage within the joint appeared healthy. A superficial skin mass was also removed from the right front fetlock.

The horse recovered uneventfully from the procedure and the surgery portals healed without complication. The long term prognosis for an athletic career is excellent.
