YEARLING SALES REPORT

Lot: 371
Animal: Zip Ya Lip – Bettor's Wish x Blah Blah Blah
Stud: Studholme Bloodstock Ltd
Date: 15 February 2024

The filly was initially examined on 26th January 2024 for effusion (excess joint fluid) in the right tarsocrural (hock) joint. There was no associated lameness and radiographs did not reveal the presence of a bone chip. Haemarthrosis (traumatic bleed into the joint) was suspected and estimated to resolve over several weeks.

The filly was re-radiographed on 14th February 2024. The effusion is still present but has reduced by approximately 50%. The radiographs appeared similar to the previous set and no obvious fragments are visible. This does not rule out a cartilaginous lesion which may not be visible radiographically, however given the reduction in effusion over the last few weeks it is more likely to be a resolving haemarthrosis.
