Surgical Report: Amour Fraternelle_On A Streak 23f

Lot: 262

Procedure: Left hock arthroscopy

Agent: L Smith

On December 12th 2024 'Amour Fraternelle_On A Streak 23f' was presented to the Rangiora Veterinary Centre Equine Hospital for left hock arthroscopy.

The left tarsocrural joint was entered and explored arthroscopically. There were OCD fragments on the medial malleolus of the tibia. The fragments were elevated and removed. The fragment beds were debrided down to normal subchondral bone. The joint was lavaged thoroughly and the incisions were closed routinely.

The surgical site had sterile bandage applied. Recovery from anaesthesia was uneventful.

The filly has a good prognosis for racing.

If you have any further questions, please feel free to contact the clinic.
