Patient: Weownthenight '24

Surgery: Arthroscopic removal of osteochondral fragmentation of the right medial malleolus of the tibia

Surgery Report:

The right tarsocrural joint was operated via two dorsomedial portals. A small loose fragment was visualised measuring approximately 5x4x2 mm. All of the rest of the joint was in good health; there was some synovial proliferation but no cartilage damage associated with this lesion. The fragmentation was removed with rongeurs.

Prognosis for full recovery:

Excellent

Christa Bodaan, DVM, DACVS-LA
